

## Creating a Checklist

### Task Requirements

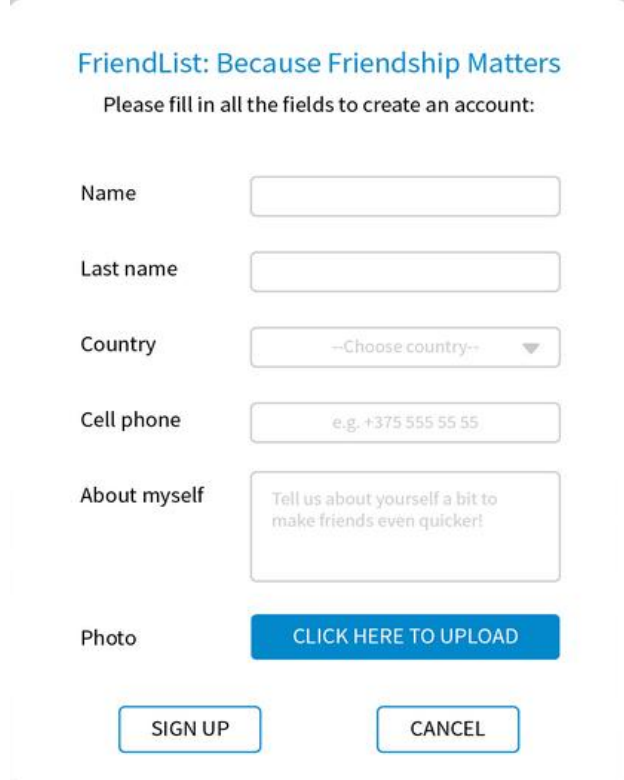

Suppose you are a software tester assigned to test a web form for creating an account in the social network application "FriendList." You have the following prerequisites for testing:

Attribute Name	Type	Mandatory	Length	Rule
Name	Text field	Yes	3–30	Contains English letters and numbers
Last name	Text field	Yes	5–50	Contains English letters and numbers
Country	Drop-down list	No	N/A	Contains 3 countries: the USA, Australia, and the UK
Cell phone	Text field	No	7–20	Contains numbers
About myself	Text field	No	Up to 500	Contains English letters, numbers, and special characters
Photo	File field	Yes	N/A	Accepts uploads of images in .png or .jpg format with a maximum size of 7 Mb
Sign up button	Button			

The acceptance criteria for testing are the following:

1. If a user enters incorrect data, the error message "Please check the entered data" appears, and the field with incorrect data is highlighted in red.
2. After clicking on the "Cancel" button, all the fields are cleared.
3. After clicking on the "Sign up" button, the following confirmation message appears: "Your account has been successfully created." The account page opens.

You also have a mock-up of the web form:

The mock-up shows a web form titled "FriendList: Because Friendship Matters". Below the title is the instruction "Please fill in all the fields to create an account:". The form contains several input fields: "Name" (text), "Last name" (text), "Country" (dropdown menu with "--Choose country--" and a downward arrow), "Cell phone" (text with a placeholder "e.g. +375 555 55 55"), "About myself" (text area with a placeholder "Tell us about yourself a bit to make friends even quicker!"), and "Photo" (a blue button labeled "CLICK HERE TO UPLOAD"). At the bottom of the form are two buttons: "SIGN UP" and "CANCEL".

### Task Description

Your task is to prepare a checklist for testing a feature. Keep in mind that you should prepare both positive and negative ideas in the checklist. Each checklist idea should have the following attributes: **ID, summary, and result (status)**.

### Evaluation criteria

Use the table below to evaluate your work.

Criteria/Points	0 points	1 point	2 points
Number of checklist ideas	Fewer than 5 ideas are proposed.	5–19 ideas are proposed.	20 or more ideas are proposed.
Content of checklist ideas	Checklist ideas are not logical, consistent, or structured.	Some of the checklist ideas are logical, consistent, and structured.	Checklist ideas are logical, consistent, and structured.
Types of checklist ideas	Neither positive nor negative ideas are proposed.	Only positive ideas are proposed.	Both positive and negative ideas are proposed.

### Recommendations:

This task can be easily solved using GPT chat. However, to help you practice writing checklist, we recommend that you try solving it on your own first. Once you've written your checklist, you can use GPT chat to generate prompts and compare your results with the AI's proposed solution.
